SUMMARY

Motivated and detail-oriented B.Tech student in Electronics and Communication Engineering with a strong interest in programming and embedded systems and hands-on experience in C, C++, React and Arduino-based projects.

Technical skills

- C programming
- C++
- JavaScript
- React
- MERN Stack
- HTML
- CSS
- Vs Code
- Arduino programming
- Microcontroller Interfacing
- Arduino IDE
- Internet of Things (IOT)
- GIT
- Communication Skills
- Problem-Solving
- Critical Thinking

Experience

INTERNSHIP AT MICROCHIP TECHNOLOGY INC.

Sept 2023 - Nov 2023

As an Embedded Developer, i learned about and worked on the following systems.

- C Programing: Linked list data structure
- Bluetooth low energy, from first to final applications
- Motor control workshop using digital signal controllers

INTERNSHIP AT EMERTXE INFORMATION TECHNOLOGY.

Sept 2025 - Nov 2025

Projects

- **Gesture Motion to speech converter glove (Major Project) | Live link**
The project titled "Gesture to Speech Glove" is a wearable communication system designed for speech and hearing impaired individuals. The system uses flex sensors and a gyroscope sensor to detect hand gestures and finger movements. An Arduino Nano processes these gestures and converts them into predefined messages displayed on an I2C LCD and audio output through a speaker. The project demonstrates the use of embedded systems, sensor interfacing, and gesture recognition to improve non-verbal communication.
- **[Netflix Clone Dynamic Streaming Web App \(HTML, Css, JavaScript\)](#) | Live link**
Built a responsive Netflix-inspired streaming web application using the TMDb API to fetch and update movies, shows, and categories in real time. Implemented audio/video playback functionality, reusable UI components, and interactive Netflix-style content sections while optimizing the interface for both desktop and mobile devices.
- **[Student database \(MERN Stack\)](#) | Live link**
Developed a full-stack web application using the MERN stack with user authentication, persistent login functionality, API integration, and MongoDB database connectivity. Deployed the project on Netlify and tested backend APIs using Postman.
- **[Password Encryption \(C++, Qt\)](#) | Live link**
Built a Password Encryption System in C++ with both console-based and Qt GUI versions. Implemented custom encryption logic using character mapping, string manipulation, arrays, and OOP concepts. Developed an interactive GUI in Qt featuring secure password input, dynamic output display, custom styling, and basic animations.
- **[ATM Simulator \(C++\)](#) | Live link**
Designed and implemented a console-based ATM system from scratch with secure login, balance inquiry, deposit, withdrawal, and transaction history features. Utilized C++ classes, functions, and control structures to simulate real banking operations, focusing on user input validation and modular program design.
- **[Library Management System \(C++\)](#) | Live link**
Built a console-based system to manage books with features such as adding, searching (by title/author), borrowing, returning, and viewing all available books. Implemented using C++ classes, vectors, and constructors, ensuring modularity and scalability while simulating real library operations.

Education

ITM UNIVERSITY GWALIOR - *B.Tech*
Major - Electronics and Communication
Sita Devi Sr. Sc School, Gorakhpur
Pragati Vidhya Peeth, Gwalior

Nov 2022 - Present
Expected Graduation: 2026
2022
2016
